

Quick Check (QC)

Output

- Assessment of the substitutability of 2 trial sites prior to the elaboration of a Site Similarity Certificate (SSC)

Benefits for the agrochemical industry

- Fast check at low cost
- Reduced risk at investing in a SSC that results in “not similar”

Input of the customer

- Location of the specified sites of interest, crops, BBCH stages, pests/diseases

Results

- Written statement that the investigated pair of trial sites is “qualified” or “not qualified” for the elaboration of a SSC

The data used

Long term averaged satellite image derived crop biomass development, based on data regularly on 12 years´ bases, diverse models

Delivery time

1 – 2 weeks or less
